Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am	Describe customer with 3-4 key characteristics - *who are they?*	Describe the customer and their attributes here
I'm trying to	*List their outcome or "job" the care about - what are they trying to achieve?*	List the thing they are trying to achieve here
but	Describe what problems or barriers stand in the way – *what bothers them most?*	Describe the problems or barriers that get in the way here
because	Enter the "root cause" of why the problem or barrier exists – *what needs to be solved?*	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions from the customer's point of view – *how does it impact them emotionally?*	Describe the emotions the result from experiencing the problems or barriers

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An F1 team performance strategist.	Compare team championship performance, evaluate tyre strategies, and identify top-performing drivers.	Analysing and comparing race data across multiple seasons is time-consuming.	Information about drivers, teams, tyre compounds, and race results requires analysis across multiple records.	Frustrated and less confident when making timely, data-driven decisions.
PS-2	An F1 technical regulation analyst.	Identify DNF patterns and investigate engine failures, brake failures, collisions, and mechanical issues.	Identifying recurring failure patterns across drivers, teams, circuits, and seasons is challenging.	Large amounts of race data must be filtered and compared to identify reliability trends.	Concerned about overlooking important patterns that could improve reliability analysis and inform technical regulations.
