Business Question and Visualization Report

Date	26 October 2026
Team ID	Gyanvi Jain
Project Name	Formula 1 Race Intelligence Dashboard
Maximum Marks	5 Marks

Visualization development refers to the process of creating graphical representations of data to facilitate understanding, analysis, and decision-making. The goal is to transform complex datasets into visual formats that are easy to interpret, enabling users to gain insights and make informed decisions. Visualization development involves selecting appropriate visual elements, designing layouts, and using interactive features to enhance the user experience. This process is commonly associated with data visualization tools and platforms, and it plays a crucial role in business intelligence, analytics, and reporting

Business Questions and Visualisation

The process involves defining specific business questions to guide the creation of meaningful and actionable visualizations in Tableau. Well-framed questions help in identifying key metrics, selecting relevant data, and building visualisation that provide insights.

1. What is the overall summary of the Formula 1 dataset?

- Visualisation: KPI cards displaying Competing Teams, Seasons in Play, Race Outcomes Logged, and Circuits Showcased.
- Purpose: Provides a quick overview of the dataset and the scope of the analysis.
- Screenshot of visualisation: Insert a screenshot of the four KPI cards from your Tableau dashboard.

2. Which drivers have the highest cumulative points?

- Visualisation: Driver Performance Leaderboard using a bar chart.
- Purpose: Ranks drivers according to cumulative points to identify top performers. A Top N parameter allows users to choose how many drivers to display.
- Screenshot of visualisation: Insert a screenshot of the driver leaderboard.

3. What are the most common reasons for drivers not finishing races?

- Visualisation: Stacked bar chart showing DNF (Did Not Finish) incidents by reason, driver, or team.
- Purpose: Helps users explore common race failure categories and compare reliability patterns.
- Screenshot of visualisation: Insert a screenshot of the DNF reliability chart.

4. Which teams demonstrate the strongest championship performance?

- Visualisation: Team Performance Ranking bar chart.
- Purpose: Compares teams based on the championship performance measures available in the dataset.
- Screenshot of visualisation: Insert a screenshot of the team performance ranking.

5. How does team championship performance vary across seasons?

- Visualisation: Team Championship Performance Analysis chart.
- Purpose: Allows users to compare team performance across different seasons and identify changes in championship results.
- Screenshot of visualisation: Insert a screenshot of the team championship analysis.

6. Which tyre compounds are used most frequently?

- Visualisation: Pie chart showing Tyre Compound Usage.
- Purpose: Displays the distribution of tyre compounds in the available dataset and helps users identify the most frequently represented compounds.
- Screenshot of visualisation: Insert a screenshot of the tyre compound usage chart.

7. How is race participation distributed geographically?

- Visualisation: Geographic map and country-wise participation treemap or highlight table.
- Purpose: Shows the geographical distribution of race participation represented in the dataset and helps users explore differences between countries.
- Screenshot of visualisation: Insert a screenshot of the geographic map or country-wise chart.

8. Which drivers and teams have achieved the most podium finishes?

- Visualisation: Packed bubble chart showing Podium Achievements by Driver and Team.
- Purpose: Enables users to compare podium achievements and identify drivers and teams with higher podium counts.
- Screenshot of visualisation: Insert a screenshot of the podium achievements chart.

- **o**
