Project Development Phase
Performance Test

Date	26 October 2026
Team ID	Gyanvi Jain
Project Name	Formula 1 Race Intelligence Dashboard
Maximum Marks	

Project Performance Testing:

S.No.	Parameter	Screenshot / Values
1	Data Rendered	Approximately 13,750 rows across 5 data sheets. The dashboard displays four KPI cards and visualisations for driver performance, DNF reliability, team performance, tyre usage, geographic participation, and podium achievements.
2	Data Preprocessing	Missing values were handled appropriately, data types were validated, race results were joined with circuit data using `circuit_id`, and calculated fields were created for DNF counts and cumulative points. DNF records were retained for reliability analysis.
3	Utilization of Filters	2 filters: DNF Reason and Year of Race Date. 1 parameter: Top N Parameter for controlling the number of drivers shown in the leaderboard.
4	Calculation Fields Used	DNF Count — counts DNF incidents. Points Cumulative — calculates cumulative driver points. Additional aggregations support KPI cards, team comparisons, and podium analysis.
5	Dashboard Design	9 visualisations across the dashboard, including 4 KPI cards, driver performance leaderboard, DNF reliability chart, team performance charts, tyre usage chart, geographic participation visualisation, and podium achievements chart.

Formula 1 Race Intelligence: From Global Overview to Championship Success

Global Driver Distribution Across Grand Prix Nations | Country-wise Race Participation | Team Championship Performance Analysis | Driver Reliability Analysis | Podium Achievements by Driver and Team | Tyre Compound Usage Distribution | Tea
